Marina Torunova

Full-Stack Software Engineer — TypeScript / JavaScript (Node.js, React, Next.js) · Ruby · PostgreSQL

France (remote) · torunova.marina@gmail.com · github.com/masechkacat · linkedin.com/in/marina-torunova · Open to freelance (micro-entreprise) and employment

SUMMARY

Full-stack engineer who ships production services end to end — TypeScript on both sides today, Ruby on Rails before that, and comfortable picking up whatever the product needs next. At Ideal Soft (B2B SaaS for property management) I build and run the services around the core product: AI proxy, Jira proxy, chat assistant, OCR pipeline for invoices and quotes, and currently a mail gateway with an agent on top. Earlier I built the backend of Locavelow, a peer-to-peer bike-rental marketplace with bookings, Stripe payments and messaging. I work AI-native: I design and maintain my own Claude Code harness (PRD → research → plan → issues, with an autonomous build loop) and review everything it produces — in practice one engineer carrying the delivery of a small team.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2023+), SQL, Ruby

Backend: Node.js, NestJS, Express, Fastify, Ruby on Rails; REST APIs, OpenAPI/Swagger, JWT + refresh tokens, WebSocket, RabbitMQ, microservices, API gateway

Frontend: React, Next.js, TanStack Query, Tailwind CSS, shadcn/ui; Angular, Vue.js; Three.js, Babylon.js (3D)

Databases & ORM: PostgreSQL, MySQL, MariaDB, MongoDB; Prisma, TypeORM, Mongoose, Typegoose

AI engineering: Claude Code (custom skills, hooks, autonomous agent loops), Anthropic/OpenAI APIs, OCR + LLM document extraction, email analysis and text generation pipelines, multi-model routing (Claude, Qwen, DeepSeek)

DevOps & quality: Docker, Docker Compose, CI/CD on GitLab Runner and GitHub Actions, Jest, Cypress, Playwright, Git, GitLab, GitHub, Jira; implementation from Figma / Adobe XD

EXPERIENCE

Full-Stack Engineer (TypeScript) — Ideal Soft, remote · 2024 – present

B2B SaaS for French property-management agencies: service requests, quotes and work orders between agencies and contractors.

- Build and run the Node.js/NestJS services around the core product: AI proxy, Jira proxy, chat assistant, OCR + LLM extraction of invoices and quotes, AI email analysis; currently the Mail Gateway with an agent on top.
- Built the contractor-facing web app (Next.js, shadcn/ui): requests, quotes, invoices, scheduling.
- Set up CI/CD on GitLab Runner with Docker (build, tests, deploy), replacing manual builds copied to the server by hand.
- Own the React front end end to end, from Figma to merge; review all AI-generated code before it ships.

Freelance Backend Developer (Ruby on Rails) — Locavelow · 2023

- Built the backend of a peer-to-peer bike-rental marketplace, live across France: listings with map search, booking requests and owner approval, Stripe payments with automatic deposit holds, in-app messaging, reviews. Ruby on Rails, PostgreSQL.

Front-End Developer — ARGO (augmented reality) · 2024

- Developed a no-code HTML editor in TypeScript (Angular) and a file-library module in Vue.js; first 3D work with Three.js and Babylon.js for AR scenes; custom client features.

Front-End Developer (internship) — League A · 2022

- Shipped features and UI fixes on a React front end backed by MongoDB (Typegoose); took part in implementation decisions.

OPEN SOURCE & PROJECTS

- **Mon Sinistre** — (in development) web app that guides homeowners through a natural-disaster insurance claim in France. npm monorepo: NestJS API, Next.js front end, shared contracts, Prisma + PostgreSQL, GitHub Actions. Entirely delivered through my own Claude Code harness; now extending it to route tasks across several models by cost.
- **Jodit** — contributor to the open-source WYSIWYG editor (PR #1284).
- **Claude Code harness** — reusable skills for PRD → research → phase planning → issue generation, plus an autonomous build loop with review gates.

EDUCATION & LANGUAGES

- **Développeur Web et Web Mobile** — state-recognised French diploma (RNCP n°34779)
- **Full-Stack JavaScript** — HTML Academy
- **Languages:** English (professional), French (C1), Russian (native)
- **Community:** dotJS Paris 2026 attendee; contributor to open-source JavaScript tooling.
